

# Stainless Steel Submersible Deep Well Pump

This submersible pump is constructed from stainless steel and designed for deep well applications. It is ideal for water extraction from significant depths in agricultural, industrial, and domestic settings.

## Product Overview

### Reliable Deep Well Extraction

The 8SP95 is a robust, all-stainless steel submersible deep well pump engineered for high-performance water extraction from boreholes. Its specialized construction ensures superior corrosion resistance and long-term durability, making it an ideal choice for demanding agricultural, industrial, and domestic water supply applications. Designed for efficiency at significant depths, this pump provides a dependable solution for consistent water delivery.

## Technical Specifications

### Material

Stainless Steel

### Pump Diameter

8 inch

### Series

8SP Series

## Key Features

### Suitable Applications

- Agricultural Irrigation
- Industrial Water Supply
- Domestic Water Systems
- Deep Borehole Extraction

### Performance Metrics

**8 inch**
