

# Stainless Steel Submersible Pump

This stainless steel submersible pump is designed for various applications. Its durable stainless steel housing ensures corrosion resistance and longevity.

## Product Overview

### Professional Stainless Steel Submersible Pump

This robust submersible pump is engineered for durability, featuring an anti-corrosive stainless steel housing and a wear-resistant shaft and impeller. Designed for both industrial and domestic applications, it includes an advanced double seal system for extended service life. The unit provides efficient cooling with an integrated thermal protector and is available in both single-phase and three-phase configurations to suit varied power environments.

## Technical Specifications

### Power Supply Compatibility

- 1 Phase
- 3 Phase
- 50Hz
- 60Hz

### Build Quality

Stainless Steel Housing, Anti-corrosive, Rust-proof, Wear-resistant

## Operation & Control

### Operating Modes

Automatic (Float Switch) • Manual

### Safety Systems

- Double seal system
- Thermal motor protector
- Self-sealing fitting
