Product Overview

Professional Submersible Pump

The SPS series stainless steel submersible pump is engineered for heavy-duty industrial, mining, and agricultural applications. Its water-cooled motor design ensures reliability during extended operations, while the integrated float switch provides automated fluid level management. With corrosion-resistant construction, this pump is an ideal solution for transferring seawater, light corrosive liquids, beverages, and industrial water.

Technical Specifications

Power Rating	400 W
Maximum Flow Rate	216 l/min
Maximum Head	9 m
Voltage / Frequency	220-240V / 50Hz
Outlet Diameter	2"
Motor Speed	2860 r/min

Safety and Design

Safety Features

- Automatic shut-off for overheating and over-current
- Water-cooled motor
- Float switch for liquid level control
- Requires external electricity-leaking circuit breaker

Insulation Class

B-Class

Certifications

CE
