

Stainless Steel Submersible Water Pump

This submersible pump series is designed for underwater operation, featuring a compact structure and lightweight design. It offers installation, usage, and maintenance convenience, along with safe operation and energy-saving benefits.

Product Overview

High-Performance Stainless Steel Submersible Pump

This stainless steel submersible pump series is engineered for efficient water extraction in demanding environments. Featuring a multi-stage design, it offers superior pressure and flow rates suitable for deep wells, industrial applications, and irrigation systems. The robust, corrosion-resistant construction ensures long-term reliability even in sandy conditions, while the high-performance motor provides consistent power for various pumping tasks.

Technical Specifications

Operating Conditions

- Dilute and clean non-corrosive liquids
- Free from solid grains or fibers
- Suitable for deep wells and underground water level lowering

| | |
|------------------|-------------------|
| Protection Grade | IP 68 |
| Insulation Class | B |
| Standards | NEMA |
| Outlet Size | G1 1/4" - G1 1/2" |
