

Stainless Steel Submersible Water Pump with Float Switch

This stainless steel submersible pump is designed for drainage and irrigation. It features a float switch for automatic operation and durable construction for demanding environments.

Product Overview

Robust Submersible Solution

This stainless steel submersible pump is designed for reliable drainage and irrigation tasks in agricultural and industrial settings. It features integrated float switch technology for automatic operation, ensuring efficient water management. The robust build quality makes it suitable for demanding environments requiring consistent performance.

Technical Specifications

Performance Matrix

Input Power (W)	Lift Height (m)	Flow Rate (L/h)
550	7.5	10500
750	8.5	12500
900	9	13000
1100	9.5	13500

Electrical Requirements

230V / 50Hz

Construction & Materials

Material Composition

Stainless Steel, Plastic

Logistics

Packaging and Capacity

1800 pcs

20' Container Capacity
