

Stainless Steel Submersible Well Pump

This submersible pump is constructed from stainless steel and designed for well applications. Its cylindrical body has a polished finish, which indicates robust construction and corrosion resistance.

Product Overview

High-Performance Submersible Pump

This stainless steel submersible pump is engineered for efficient water extraction from deep wells and boreholes. Built with high-grade corrosion-resistant materials, it ensures long-term reliability even in challenging water conditions. The multi-stage design provides high pressure and flow rates, while its compact form factor allows for seamless installation in narrow well applications.

Technical Features

Material	Stainless Steel
Pump Design	Multi-stage
Key Attributes	Corrosion Resistant, High Efficiency, Compact Design, Easy Installation

Application

Suitable Applications

- Residential water supply
- Agricultural irrigation
- Industrial water extraction
