

Stainless Steel Torx Flat Head Machine Screw

These stainless steel Torx drive countersunk flat head machine screws are designed for secure and flush fastening. The Torx drive increases torque transfer and reduces cam-out.

Product Overview

Professional Grade Fastening

These stainless steel Torx drive countersunk flat head machine screws are engineered for secure, flush fastening in demanding industrial applications. The Torx drive system ensures superior torque transfer while significantly minimizing the risk of cam-out during installation. Crafted from high-quality stainless steel, these components provide excellent corrosion resistance and long-term durability for machinery, electronics, and precision assembly.

Technical Specifications

Available Materials	SS304, SS316, SS410
Grade	A2, A4
Dimensions	M5*17
Thread Type	Fine pitch thread
Tip Shape	Flat point
Finish	Plain

Features & Compliance

Key Features

- Excellent corrosion resistance
- Torx drive for high torque transfer
- Countersunk flat head for flush finish
- Suitable for demanding environments

Certifications

ISO9001 • ROHS • SGS • CTI
