

Stainless Steel V-Wire Water Well Screen

This stainless steel V-wire screen is designed for water well applications. It provides efficient filtration and maximum water flow while preventing sand and gravel from entering the well.

Product Overview

High-Performance Well Screen Technology

These stainless steel V-wire wrapped screens are engineered for superior water filtration and sand control in diverse geological environments. The continuous slot design maximizes open area while the V-shaped profile wire reduces clogging and enhances overall flow capacity. Built for durability, these screens offer excellent corrosion resistance, ensuring long-term reliability for water, oil, and environmental monitoring wells.

Technical Specifications

Key Performance Indicators

100 %

Open Area Efficiency

0 Minimal

Clogging Risk

Construction

V-wire wrapped resistance welded

Material

Stainless Steel

Application Suitability

Compatible Well Types

- Water Wells
- Oil Wells
- Environmental Monitoring Wells

Key Features

Corrosion Resistant • Anti-Clogging • High Flow Capacity
