

Stainless Steel Water Pump

This water pump features a two-pole induction motor and is designed for continuous service. It has Class B insulation, IP44 protection, and includes a thermal protector for single-phase operation.

Product Overview

Reliable Deep Well Self-Priming Performance

This stainless steel self-priming water pump is engineered for reliability and efficiency in both residential and commercial settings. It is specifically designed to function effectively even when the water level is up to 35 meters below the pump's installation site. Featuring a robust, corrosion-resistant build, this pump is ideal for water pressure boosting, irrigation, and general water transfer applications.

Technical Specifications

Maximum Suction Depth

35 m

Max Suction Depth

Compatible Liquids

- Clean water
- Non-chemically aggressive liquids

Construction Material

Stainless Steel

Installation & Usage

Common Applications

Domestic water supply • Garden irrigation • Water pressure boosting • General water transfer

Installation Guidelines

- Install in an enclosed environment
- Shelter from inclement weather
- Suitable for small to medium surge tanks
