

# Stainless Steel Water Pump

This water pump features a two-pole induction motor and provides continuous service. It is equipped with a thermal protector for single-phase operation and is suitable for various water boosting, circulation, and supply systems.

## Product Overview

### Reliable Stainless Steel Water Pump

This robust stainless steel water pump is designed for efficient and reliable water transfer in domestic and civil applications. Featuring a durable stainless steel housing for superior corrosion resistance, it is ideal for water distribution, irrigation, and pressure boosting systems. The unit is powered by a high-performance electric motor, ensuring consistent operation and long-term durability in varied environments.

## Technical Specifications

Housing Material	Stainless Steel
Suitable Liquids	Clean water, Non-aggressive liquids

## Use Cases

### Common Applications

- Domestic water distribution
- Civil pressure sets
- Liquid transfer
- Garden and allotment irrigation
- Water boosting and circulation

## Installation Requirements

### Environment

Enclosed environment • Sheltered from weather
