

Standalone Auto Loader

These standalone auto loaders have a small footprint for direct placement on other machines or containers. They feature microcomputer control and alarms for overload and lack of material.

Product Overview

Compact Automated Material Loading

This standalone auto loader is designed with a small footprint to be mounted directly onto existing machines or storage containers. It features precise microcomputer control with automated alerts for overload conditions and material depletion. Built for industrial efficiency, it offers reliable suction performance to streamline material handling processes in your facility.

Technical Specifications

Control System	Microcomputer controlled with cable-remote interface
Key Features	Small Footprint, Overload Alarm, Lack of Material Alarm, Cable-controlled
Filtration	Yes

Model Variants

Model Performance

Model	Motor/Pump Type
WSAL-300G	High-speed rectificative motor
WSAL-400G	Induction high-pressure pump
