

Standard Definition Digital Set-Top Box

This digital set-top box is DVB-S compatible for free-to-air reception. It delivers standard definition MPEG-2 digital TV.

Overview

Standard Definition Digital Set-Top Box

The DVS-0601 is a reliable standard definition digital set-top box designed for receiving and decoding digital television signals. It is fully DVB-S compatible and supports free-to-air (FTA) channels, making it an excellent choice for straightforward home entertainment setups. With its robust metal housing and dual decoder functionality, this unit offers consistent performance and the unique ability to watch one program while recording another to an external VCR.
