

Stationary Breathing Air Compressor

This stationary air compressor is designed for environments requiring high-quality compressed air. It features a PLC automatic control system that monitors temperature and oil levels, ensuring optimal efficiency.

Product Overview

Stationary Breathing Air Compressor

This stationary automatic breathing air compressor is engineered for industrial applications that demand high-quality, reliable compressed air. Designed for continuous operation, the unit features a robust construction and advanced control systems for automated monitoring of pressure, temperature, and runtime. It is specifically optimized for environments where clean and quiet air delivery is essential, making it suitable for medical facilities, laboratories, and manufacturing plants.

Operational Features

Operation Mode	Automatic
Installation	Stationary
Duty Cycle	Continuous

Safety and Control

Monitored Parameters

- Pressure
- Temperature
- Runtime

Safety Features	Yes
-----------------	-----

Applications

Suitable Environments	Medical Facilities, Laboratories, Manufacturing Plants
-----------------------	--

Performance

Noise Profile

Low Noise
