

Stationary Diesel Engine

This is a stationary diesel engine designed for heavy-duty use. It can power agricultural equipment, generators, and water pumps.

Overview

Heavy-Duty Stationary Diesel Engine

This stationary diesel engine is engineered for reliable performance in demanding industrial and agricultural environments. Designed as a single-cylinder unit, it features a robust gray engine block and a distinct red fuel tank, ensuring durability during continuous operation. It is an ideal power solution for applications such as water pumps, generators, and agricultural machinery, providing stable output when mounted on its integrated base.

Technical Specifications

Engine Type	Single-cylinder stationary diesel engine
Model Designation	170
Origin	China

Key Metrics

Performance Highlights

170

Model Series

Features

Design & Construction

- Integrated base mount for stability
- Cylindrical air intake filter system
- Heavy-duty gray engine block
- High-capacity red fuel tank

Applications

Suitable Applications	Agricultural Equipment, Power Generators, Water Pumps, Industrial Machinery
-----------------------	---
