

Steam Turbine Sealing Strips

These sealing strips are designed for use in power plant steam turbines. They provide effective sealing to minimize steam leakage and maximize turbine efficiency.

Product Overview

High-Performance Steam Turbine Sealing Strips

These sealing strips, commonly known as Fengpian, are engineered for critical applications in industrial steam turbines. Designed to minimize steam leakage, they play a vital role in maintaining high thermodynamic efficiency during turbine operation. Their robust construction ensures durability and consistent performance even under the demanding conditions of modern power generation facilities.

Technical Specifications

Key Benefits

- Effective steam leakage reduction
- Enhanced turbine thermal efficiency
- High durability in high-pressure environments

Component Type	Steam Turbine Sealing Strip (Fengpian)
Turbine Compatibility	Qingdao, Beizhong, Nanjing
