Product Overview

Professional Steel Bar Bending Solution

This heavy-duty steel bar bending machine is engineered for precision and efficiency in demanding construction environments. It features a robust construction with a rotating table and multiple bending points, ensuring consistent results for steel reinforcing bars. Equipped with automatic and touch-startup controls, the machine offers enhanced productivity and simplified operation for construction sites, precast yards, and steel fabrication shops.

Technical Features

Core Components

- Motor
- Gear System
- Operation Disc
- Breaker
- Machine Body

Control System

Automatic Controls, Touch Startup, Safety Switch

Performance

Bending Capabilities

Adjustable Angle Settings • Multiple Bending Points • High Precision

Ideal Applications

- Construction sites
- Precast yards
- Steel fabrication shops
