

Steel Bar Stirrup Bending Machine

This steel bar stirrup bending machine utilizes a CNC system for accurate bending. High-quality steel forging gear and a precision baffle ensure reliable and consistent stirrup production.

Product Overview

Heavy-Duty Steel Bar Bending Machine

This industrial-grade steel bar bending machine is engineered for precision and durability in construction and steel fabrication environments. Featuring advanced MCU control and a CNC system, it offers highly accurate bending capabilities for various rebar types. The machine is constructed with high-quality 40 CrMo steel gears and Mn alloy steel baffles, ensuring reliable performance and longevity under demanding, heavy-duty conditions.

Key Features

Key Advantages

- Maintenance-free spindle with heavy-duty gear box assembly
- High-temperature quenched alloy steel components for wear resistance
- Reinforced disc and square steel structure to prevent deformation
- Enclosed electric cabinet for moisture and dust protection
- Double-sided operation for increased efficiency
- Rotary oil-way for convenient maintenance

Certifications

SGS, CE, ISO, TUV

Technical Specifications

Bending Capacity by Model

Model	Plain Bar (mm)	II Class Reinforce (mm)
JN/GW40	6-40	8-32
JN/GW45	3-45	8-36
JN/GW50	6-50	8-40
JN/GW55	6-55	8-45

Power Rating

3 kW
