

Steel I-Beams for Construction

These steel I-beams are engineered for structural applications in the construction industry. They provide reliable support and load-bearing capacity for various building projects.

Product Overview

High-Strength Structural Steel I-Beams

These steel I-beams are engineered for heavy-duty construction applications, offering superior load-bearing capacity and structural integrity. Designed for versatility, they provide a reliable foundation for framing, support structures, and industrial building projects. Their uniform finish and precise dimensions ensure consistent performance and efficient assembly on site.

Technical Specifications

Surface Finish

Gray Metallic • Industrial

Material Composition

Structural Steel

Logistics & Handling

Packaging

Strapped layered stack

Storage Environment

Warehouse/Indoor
