

Steel Industrial Roller

Heavy-duty rollers are manufactured from high-grade steel. They feature a cylindrical body with precision-machined journals at each end for smooth rotation.

Product Overview

Industrial-Grade Steel Roller

These heavy-duty steel rollers are engineered for demanding industrial environments where load-bearing capacity and durability are critical. Each unit features a precision-machined cylindrical body with specialized journals designed for consistent, smooth rotation under pressure. The professional surface finish ensures high performance and minimal wear in rigorous operational settings.

Technical Specifications

Construction Details

- Cylindrical body design
- Precision-machined journals
- Smooth surface finish

Material	High-grade steel
----------	------------------

Applications

Recommended Use	Heavy-duty industrial, High load-bearing, Material handling
-----------------	---
