

Steel Plant Construction Project

This project involves the construction of an integrated steel plant. The facility is designed to have a capacity of 1 million tons.

Project Overview

Integrated Steel Plant Development

This large-scale industrial project entails the construction of an integrated steel plant with a total production capacity of 1 million tons. The initiative represents a significant expansion in Southeast Asia, utilizing a long-process manufacturing approach. The development highlights high-level industrial engineering and complex structural steel construction standards.

Technical Specifications

Annual Production Capacity

1 million tons

Total Capacity

Manufacturing Process

Long-process steel production

Project Details

Project Classification

EPC Contract • Industrial Infrastructure • Steel Plant Expansion

Region

Southeast Asia, Vietnam
