

Steel Roll Cage Container

This roll container has a capacity of 500kg and is available in folding and dismantlable models. It is designed for efficient and secure transportation of goods.

Product Overview

Professional Logistics Solution

This heavy-duty steel roll cage container is engineered for the efficient and secure transportation of goods in warehouses and retail environments. Designed for maximum maneuverability, the unit features robust steel construction and reinforced panels to handle demanding logistical operations. Its modular design options allow for either folding or dismantlable configurations, providing versatility for various storage and shipping needs.
