

Steel Strip Cleaning and Treatment Line

This steel strip pickling line is engineered for continuous cleaning and treatment. It utilizes a series of interconnected tanks and chemical processes to prepare metal surfaces.

System Overview

Industrial Steel Strip Cleaning and Treatment

This industrial steel strip pickling line is engineered for high-efficiency continuous metal processing. The system integrates a series of interconnected chemical treatment tanks, precision piping, and robust support structures to ensure uniform surface quality. Designed for durability and safety, the configuration includes comprehensive ventilation systems, access platforms, and centralized control mechanisms for complex chemical treatment cycles.

Treatment Method	Pickling, Chemical Treatment, Continuous Processing
-------------------------	---

Technical Features

Safety Infrastructure

- Integrated safety railings
- Ventilation ducting system
- Safe-access service platforms
- Automated valve control mechanisms

Configuration

Component	Function
Chemical Tanks	Surface treatment and cleaning
Piping Network	Fluid circulation and chemical distribution
Control Interface	System regulation and parameter management
