Project Overview

Comprehensive Industrial Construction

This steel structure solution is designed for large-scale industrial and commercial applications. The project scope encompasses the construction of main plant facilities, power stations, and essential supporting infrastructure. With a total construction area of 100,000 square meters, this system offers a robust and scalable framework for complex building requirements.

Total Construction Area	100000 sqm
Project Phases	Phase 1, Phase 2, Phase 3

Scope of Work

Included Infrastructure

- Main Plant Building
- Power Station
- Power Distribution Room
- Fire Pool
- Outdoor Supporting Works

Service Capabilities

EPC Services Offered

- Engineering Design
- Material Procurement
- Construction & Erection
- Project Management
- Quality Control

Suitable Applications

Warehouses • Factories • Office Buildings • Shopping Centers
