

Steel Wire Reinforced Rubber Seal

This rubber seal is reinforced with solid steel wire for enhanced durability and performance. The unique profile ensures optimal compression and sealing efficiency in various applications.

Product Overview

High-Performance Reinforced Sealing Solution

This solid steel wire rubber seal is engineered for demanding industrial, automotive, and construction applications where durability is paramount. By integrating a solid steel wire core into high-quality rubber, it offers superior dimensional stability and structural integrity under compression. The unique profile design ensures an airtight barrier against contaminants while maintaining long-term resistance to wear, tear, and environmental factors.

Technical Specifications

Reinforcement	Solid steel wire
Key Properties	Wear-resistant, Tear-resistant, Deformation-resistant, High compression

Applications

Suitable Industries

- Automotive
- Industrial Machinery
- Construction
- Marine
