

Steel Wire Rope Thimble

Precision thimbles designed for demanding petroleum prospecting engineering applications. Constructed from high-grade steel, they ensure durability and resistance to wear and corrosion.

Product Overview

Precision Engineering Thimbles

These high-grade steel wire rope thimbles are specifically engineered for demanding environments such as petroleum prospecting. Designed to provide reliable support and protection for wire ropes, they ensure consistent performance under load. With exacting manufacturing tolerances, these components are an ideal choice for critical international engineering and petrochemical projects.

Technical Specifications

Key Features

- High corrosion resistance
- Durable wear resistance
- Exacting manufacturing tolerances
- Suitable for heavy-duty contracting

Material Composition	High-grade steel
Primary Applications	Petroleum Prospecting, Petrochemical Engineering, Wire Rope Support
