

# Steering Component with Ball Joint

This steering component incorporates a ball joint on one end and a curved connecting arm. It facilitates steering linkage and control within automotive applications.

## Product Overview

### High-Performance Steering Component

This professional-grade steering component is engineered for durability and precise mechanical performance. Featuring a robust cast metal construction and an integrated ball joint assembly, it is designed to maintain structural integrity under demanding operational conditions. The inclusion of a secure castellated nut ensures reliable locking in critical steering linkages, making it an essential replacement or maintenance part for automotive and machinery systems.

## Technical Details

Material	Cast metal
Fastening Mechanism	Castellated nut
Key Features	Ball Joint, Curved Connecting Arm, Cast Construction
Mounting Type	Circular mounting point
