

Steering Idler Arm Assembly

This steering idler arm assembly provides support and pivot points for the steering linkage. It is made from high-strength steel, features durable bushings, and ensures smooth and precise steering control.

Product Overview

High-Performance Steering Support

The steering idler arm assembly is a vital component designed to provide essential support and pivot points for the vehicle's steering linkage. Engineered from high-strength steel, this assembly ensures smooth, precise, and reliable steering control. Featuring a durable finish for corrosion resistance and an integrated ball joint, it is the ideal solution for restoring optimal steering function.

Technical Specifications

Material	High-strength steel
Surface Finish	Black corrosion-resistant coating
End Connection	Ball joint

Features

Primary Benefit

Restores Steering Precision

Key Features

Corrosion Resistant, Durable Bushings, High-Strength Steel, Precision Engineered
