

Steering Linkage Component with Bushings

This durable component is suitable for steering linkage systems. It features multiple mounting points and a central pivot for integration into a larger mechanical system.

Product Overview

High-Performance Steering Linkage

The SI-4670 is a robust steering linkage component engineered for demanding mechanical systems. Its durable construction is complemented by integrated bushings and a threaded end to ensure reliable movement, precise stability, and secure fastening. This component is designed to facilitate seamless integration into complex steering assemblies, offering high reliability for professional industrial applications.

Technical Details

Model Identifier	SI-4670
Surface Finish	Black industrial coating

Features

Included Components

- Integrated bushings
- Threaded attachment end
- Reinforced mounting points
- Central pivot mechanism

Certification & Status	Mechanical Grade, Heavy Duty, Precision Engineered
------------------------	--
