

# Steering Rack Broach Set

These broaches are designed for precision machining of steering racks. Each broach features a series of cutting teeth arranged to progressively remove material, ensuring a smooth and accurate finish.

## ADDITIONAL IMAGES

## Product Overview

### High-Precision Steering Rack Broach Sets

These professional-grade broach sets are engineered for the precise machining of steering racks in high-volume manufacturing environments. Each set features optimized tooth geometry designed to progressively remove material, ensuring superior dimensional accuracy and smooth surface finishes. Constructed from durable high-speed steel (HSS), these tools are built for longevity and consistent performance across a variety of industrial broaching machines.

## Technical Specifications

Material	High-Speed Steel (HSS)
Components	4 pieces
Primary Application	Steering Rack Manufacturing, Internal Grooving, Profile Shaping

## Manufacturing Standards

Customization	Face teeth broaches are manufactured according to specific order requirements.
