

Step-Through Motorcycle with Semi-Automatic Transmission

This step-through motorcycle is designed for urban commuting. It features a small displacement engine, typically between 50cc and 125cc, and a semi-automatic transmission.

Overview

Urban Commuter Utility

This step-through motorcycle is designed for efficient, short-distance urban travel. Featuring a reliable four-stroke, single-cylinder engine and a user-friendly semi-automatic transmission, it eliminates the need for a manual clutch. Its robust frame and practical suspension setup ensure stability and ease of operation for daily commuting needs.

Engine & Performance

Engine Configuration	Single-cylinder, air-cooled, four-stroke
Displacement Range	50cc - 125cc
Transmission	Semi-automatic (foot-operated gear shift, no clutch lever)

Chassis & Handling

Frame Material	Pressed steel or tubular steel
