

Stone Coated Steel Tile Roll Forming Machine

This stone coated steel tile roll forming machine is designed for manufacturing roofing panels. It shapes metal sheets into specific profiles used in stone coated steel roofing systems.

ADDITIONAL IMAGES

Product Overview

High-precision unit designed for consistent and efficient roofing tile production.

Industrial Roofing Tile Production

This specialized roll forming system is designed for the efficient manufacturing of stone-coated steel roofing panels. Engineered for high-volume industrial environments, it incorporates precision forming technology to ensure consistent dimensional accuracy and structural integrity. The machine features advanced automation and customizable profiles to meet diverse architectural requirements for durable, high-quality roofing materials.

Operational Advantages

1: Plastic film or wood case as usual.
2: We also can do the packaging according to customers' need.

Industrial packaging options including wood case or plastic film for international transport.

Why Choose This Machine

- Direct factory supply pricing
- Over 10 years of international export experience
- Global reach with installations in approximately 34 countries
- Professional R&D team for custom machine requirements
- High-end, robust industrial design
- Free technical support and accessory supply

Production Line Components

Professional roll forming line setup for stone-coated tile production.

Key Machine Modules

Component ID	Module Name
1	Slitting and cutting device
2	Lace shearing device
3	315 Four-column press machine
4	Auto bottom glue spraying device
