

Stone Slab Cutting Machine

This machine is designed for cutting large slabs of stone into smaller sizes. It is constructed from heavy-duty materials and allows for precision cutting and shaping of various stone types, including granite, marble, and limestone.

Overview

Industrial Stone Slab Cutting Machine

This heavy-duty machinery is engineered for the precise cutting and shaping of large stone slabs, including granite, marble, and limestone. Designed for industrial environments such as quarries and stone processing plants, it features a robust gantry system and a stable horizontal bed to ensure accuracy during operation. Its durable steel construction is built to withstand the rigorous demands of continuous professional use.

Technical Specifications

Suitable Environments

- Quarries
- Stone processing plants
- Construction sites

Compatible Materials	Granite, Marble, Limestone
Construction Material	Heavy-duty steel

Performance Metrics

Precision Capabilities

Precision Cutting • Precision Shaping
