

Stone Surface Grinding Machine

This abrasive and grinding machine is designed for precise stone processing. It features a robust gantry-style construction for stability and accuracy during operation.

Overview

Precision Stone Surface Grinding

This stone surface grinding machine is engineered for high-precision material removal and surface finishing. Featuring a robust gantry-style construction, it provides exceptional stability and accuracy during operation. The system includes a multi-head grinding attachment and a secure clamping worktable, making it a reliable solution for processing various stone types with consistent quality.

Construction & Design

Design Style

Gantry-style • Industrial

Frame Construction

Heavy-duty steel

Operational Features

Grinding Mechanism

Multi-head grinding attachment

Workholding

Yes

Control System

Adjustable control panel for grinding parameters

Performance Metrics

Key Capabilities

- Precise material removal
- Surface finishing
- Vibration resistance
- Adjustable grinding parameters
