

# Stretch Fabric Sewing Machine

This stretch sewing machine is designed for elastic and stretchable materials. It features adjustable stitch length and width, along with a differential feed system.

## Overview

### Industrial Stretch Fabric Sewing Solution

The FK1101-1 is a specialized sewing machine engineered specifically for handling elastic and stretchable fabrics. Designed for industrial-grade durability, it features a precision needle mechanism and a differential feed system that effectively prevents puckering or unwanted fabric stretching during operation. This high-speed unit is an ideal choice for garment manufacturing, sportswear production, and other textile applications requiring consistent, reliable performance.

## Performance

### Key Performance Metrics

**1 FK1101**

Model Series

### Specialized Features

Differential Feed System, High-Speed Motor, Precision Needle Mechanism, Adjustable Stitch Length, Adjustable Stitch Width

## Usage

### Ideal Applications

- Garment Manufacturing
- Sportswear Production
- Elastic Fabric Processing

### Operational Design

User-Friendly Interface • Industrial Durability
