

Stretch Film Production Line

This stretch film making line is designed for the production of high-quality stretch film. It features precise control systems to ensure consistent film thickness and width.

Overview

High-Efficiency Stretch Film Production Line

This advanced stretch film production line is engineered for manufacturing high-quality film with precise thickness and width control. Featuring a fully integrated system including an extrusion unit, cooling, stretching, and winding components, it offers a robust solution for diverse industrial needs. The machine is designed for ease of use, incorporating intuitive control systems and essential safety features to ensure reliable, high-volume production of hand-use, machine-use, and jumbo roll films.

Technical Features

Integrated Units

- Extrusion unit
- Cooling system
- Stretching unit
- Winding unit
- Central control panel

Production Capabilities

Compatible Film Types

Hand-use film, Machine-use film, Jumbo roll film

Operational Safety

Safety Features Included

Yes
