

Strip Steel Temper Mill for Material Properties Control

This high-performance strip steel temper mill is designed for precise control of material properties. It features advanced hydraulic systems for accurate force application and tension control, ensuring consistent elongation and surface finish.

Overview

High-Performance Temper Mill

This high-performance strip steel temper mill is engineered for precise material property control during steel processing. Featuring advanced hydraulic systems, the equipment ensures accurate force application and tension control to achieve consistent elongation and superior surface finishes. Its robust design and sophisticated automation integration optimize production efficiency while effectively minimizing material waste across various steel grades.

Technical Capabilities

Key Features

- Advanced hydraulic force application
- Precision tension control
- Consistent elongation management
- Sophisticated automation system
- Robust rolling stand architecture
