

Structural Steel Casting with Cylindrical Boss

This durable steel casting is designed for robust structural applications. It features a central cylindrical boss for secure mounting or connection and a rectangular base with integrated support ribs for enhanced strength and stability.

Product Overview

Structural Steel Casting Overview

This durable steel casting is precision-engineered for robust structural applications requiring high stability and strength. It features a central cylindrical boss designed to facilitate secure mounting or structural connections. The rectangular base incorporates integrated support ribs, ensuring the component performs reliably in demanding industrial environments.

Design Features

Key Design Elements

Rectangular Base, Cylindrical Boss, Support Ribs, Structural Casting

Performance

Suitability

- Demanding environments
- Secure mounting applications
- Structural load-bearing
