

Submersible Bilge Pump for Marine Use

This submersible bilge pump is made of stainless steel. It is designed for efficient water removal in marine and industrial applications.

Product Overview

Professional Marine Bilge Pump

The WWB-02302 is a robust submersible bilge pump engineered for high-efficiency water removal in demanding marine and industrial environments. Featuring durable stainless steel construction, this unit provides reliable performance for clean or slightly contaminated water management. Its compact footprint ensures seamless installation within confined spaces, making it an ideal choice for various technical applications.

Technical Specifications

Suitable Applications

- Marine
- Industrial
- Clean water transfer
- Slightly contaminated water removal

Model Number	WWB-02302
Construction Material	Stainless Steel
Installation	Submersible
