

Submersible Borehole Pump for Deep Wells

This submersible borehole pump is designed for deep well applications. It is constructed with stainless steel components for durability and corrosion resistance.

Product Overview

High-Efficiency Deep Well Extraction

This submersible borehole pump is engineered for reliable water extraction in demanding deep-well applications. Built with high-grade stainless steel components, it ensures long-term durability and resistance to corrosive environments. The integrated multi-stage impeller system provides high-efficiency water delivery, making it an ideal solution for agricultural irrigation, industrial water systems, and domestic water supply.

Construction & Design

Key Features

- Multi-stage impeller system
- Submersible electrical motor
- Corrosion-resistant casing
- Designed for deep well submersion

Material

Stainless Steel

Application Suitability

Primary Applications

Agricultural • Industrial • Domestic
