

Submersible Borehole Pump for Solar Power

This submersible borehole pump is designed for water extraction from wells and boreholes. Its stainless steel construction ensures durability and resistance to corrosion in demanding environments.

Overview

High-Efficiency Solar Water Solution

The 3TSS Solar Pump is a high-performance submersible borehole pump engineered for reliable water extraction in off-grid environments. Featuring a durable stainless steel construction, this multi-stage pump is designed for high head capabilities and maximum corrosion resistance. It is an ideal solution for professional buyers seeking sustainable water supply for irrigation, pressure boosting, and remote livestock watering.

Key Features

Core Advantages

- Solar-compatible motor for off-grid operation
- Multi-stage design for high head performance
- Integrated check valve to prevent backflow
- Corrosion-resistant stainless steel components
- Low maintenance and easy installation

Technical Specifications

Pump Diameter

3 inch

Diameter

Material

Stainless Steel

Pump Design

Multi-stage Submersible

Safety Features

Integrated check valve for pump protection

Applications

Primary Applications

Irrigation, Borehole Extraction, Water Supply, Pressure Boosting, Off-grid Operations
