

Submersible Borehole Pump

High-efficiency submersible borehole pumps designed for reliable water extraction from wells and boreholes. Constructed with durable stainless steel components for corrosion resistance and long-lasting performance.

Product Overview

High-Efficiency Borehole Solution

This submersible borehole pump is engineered for reliable water extraction from deep wells and boreholes. Constructed with durable stainless steel components, it offers excellent corrosion resistance and long-lasting performance. The system includes advanced features like a built-in check valve and integrated motor protection for seamless operation in irrigation, water supply, and dewatering applications.

Technical Features

Key Design Advantages

- Valveless air distribution for increased reliability
- Simplified piston design for extended lifespan
- Efficient energy transfer for faster drilling speeds
- Reduced air and oil consumption
- Modular construction for easier maintenance and disassembly

Maintenance & Durability

Heat-treated components, Simple internal structure, Multi-step thread connections, Corrosion-resistant stainless steel
