

Submersible Centrifugal Water Pump

This submersible centrifugal pump is engineered for efficient water extraction. Its multi-stage impeller system is encased in a durable, corrosion-resistant stainless steel body.

Overview

Submersible Centrifugal Water Pump

This submersible centrifugal pump is engineered for high-efficiency water extraction in demanding environments. It features a durable stainless steel body that ensures long-term corrosion resistance and reliability. Equipped with a multi-stage impeller system and a high-performance motor, this unit is an ideal solution for deep well applications, agricultural irrigation, and municipal water supply systems.

Design & Construction

Body Material	Stainless Steel
Impeller System	Multi-stage
Protection Features	Inlet Filter, Corrosion Resistant

Applications

Recommended Applications

- Deep well water extraction
- Agricultural irrigation
- Water supply systems
