

Submersible Deep Well Pump

This submersible deep well pump efficiently extracts water from deep wells. Its multi-stage impeller system delivers high pressure and flow rates.

Overview

High-Efficiency Submersible Deep Well Pump

This submersible deep well pump series is engineered for reliable and efficient water extraction from deep wells. Featuring a robust multi-stage impeller system, it delivers high pressure and consistent flow rates suitable for demanding environments. Built with durable materials, this pump is an ideal solution for agricultural irrigation, municipal water supply, and various industrial applications.

Technical Specifications

Pump Type	Submersible Deep Well Pump
Design Features	Multi-stage impeller system, High-pressure output, Durable construction

Applications

Primary Applications

- Agricultural irrigation
- Water supply systems
- Industrial water extraction
