

Submersible Deep Well Water Pump

This submersible pump is designed for efficient water extraction from deep wells. It features a stainless steel body for durability and corrosion resistance.

Overview

High-Efficiency Deep Well Solution

This submersible deep well water pump is engineered for reliable water extraction in demanding environments. Designed with a durable stainless steel body, it offers excellent corrosion resistance and a long service life for both domestic and industrial applications. It is capable of handling clean water with sand content up to 150g/m³, ensuring consistent performance for irrigation, river pumping, and water supply needs.

Technical Specifications

Max Sand Content	150 g/m ³
Suitable Applications	Well Pumping, River Pumping, Farm Irrigation, Domestic Water Supply, Industrial Use

Safety & Installation

Safety Instructions

- Always disconnect power before servicing
- Pump must be properly grounded to prevent electrical shock
- Inspect pump and cable for damage before installation
- Attach safety cable to prevent upward movement toward well head
