

Submersible Deep Well Water Pump

This submersible water pump is designed for deep well applications. It is constructed with stainless steel for durability and corrosion resistance and provides reliable water delivery from wells with narrow diameters.

Product Overview

High-Efficiency Deep Well Solution

This submersible deep well water pump is engineered for superior durability and performance in demanding environments. Constructed from high-grade stainless steel, it offers excellent corrosion resistance for long-term reliability. Its high-efficiency motor is designed to minimize energy consumption while ensuring consistent water delivery for residential, agricultural, and industrial applications.

Technical Specifications

Well Diameter	4 inches
Construction Material	Stainless Steel

Application Suitability

Recommended Use	Residential, Agricultural, Industrial
-----------------	---------------------------------------

Performance Features

Performance Highlights

- High-efficiency motor for energy savings
- Corrosion-resistant stainless steel body
- Reliable performance in narrow diameter wells
