

Submersible Deep Well Water Pump

This submersible pump is designed for deep well applications. It features a cylindrical body and is suitable for efficient water extraction.

Overview

High-Efficiency Deep Well Extraction

This submersible water pump is specifically engineered for reliable water extraction from deep boreholes. Featuring a robust cylindrical body available in stainless steel or blue painted finishes, it is built to withstand the rigors of continuous operation. Designed for versatility, this unit provides efficient water lifting capabilities suitable for residential, agricultural, and industrial water supply systems.

Technical Specifications

Pump Type	Submersible
Application Areas	Residential, Agricultural, Industrial

Design & Construction

Body Material Options

Stainless Steel • Painted Steel

Installation Features

- Top outlet for water discharge
- Integrated lifting eyes
