

# Submersible Deep Well Water Pump

This submersible well pump is engineered for efficient water extraction. It features a multi-stage centrifugal pump construction with a stainless steel body and a corrosion-resistant motor housing.

## Overview

### Submersible Deep Well Pump

This high-performance submersible pump is engineered for efficient water extraction in deep well applications. Featuring a durable stainless steel body and corrosion-resistant motor housing, it is designed for long-lasting operation in demanding environments. Integrated safety features, including a built-in check valve and thermal overload protection, ensure reliable performance for irrigation and water supply systems.

## Technical Specifications

Pump Diameter	8 inch
Construction	Multi-stage centrifugal pump
Body Material	Stainless steel

## Features

### Suitable Applications

- Deep well water extraction
- Irrigation systems
- General water supply

### Performance Highlights

**1 Quiet**

Operation

**1 High**

Corrosion Resistance

### Safety & Protection

Thermal Overload Protector, Built-in Check Valve
