

Submersible Deep Well Water Pump

This submersible deep well pump is designed for efficient water extraction. It is constructed with durable materials for long-lasting performance in demanding environments and suitable for various applications including irrigation, water supply, and industrial use.

Product Overview

High-Efficiency Submersible Deep Well Pump

The QJ series deep well pump is engineered for reliable and efficient water extraction from deep underground sources. Built with durable materials, this multi-stage impeller system ensures consistent performance in demanding environments, making it suitable for irrigation, municipal water supply, and industrial applications. Its robust design facilitates straightforward installation and long-term maintenance.

Technical Specifications

Key Features

- Multi-stage impeller system
- High-pressure output
- Durable construction
- Easy maintenance design

Pump Type	Submersible Multi-Stage
Primary Applications	Irrigation, Water Supply, Industrial Use
