

Submersible Deep Well Water Pump

This submersible pump is designed for deep well water extraction. It is constructed with durable materials for reliable operation in demanding environments.

Product Overview

High-Performance Deep Well Extraction

This submersible deep well water pump is engineered for reliable water extraction in demanding environments. Constructed with durable, corrosion-resistant components, it ensures consistent operation for residential, agricultural, and industrial water supply systems. Its robust motor and efficient impeller design work in tandem to provide stable pressure and flow, making it a dependable solution for deep-well applications.

Technical Specifications

Construction Features

- Corrosion-resistant components
- Robust motor design
- High-efficiency impeller

Suitable Applications

Residential, Agricultural, Industrial

Performance

Key Performance Indicators

1 High

Flow Consistency

1 High

Pressure Stability
