

# Submersible Deep Well Water Pump

This submersible deep well water pump is designed for efficient water extraction from deep wells. The multi-stage design allows for high head capabilities, making it suitable for deep well applications.

## Product Overview

### High-Efficiency Deep Well Extraction

This submersible deep well water pump is engineered for high performance and energy efficiency, ensuring optimal water output with minimal power consumption. Its durable stainless steel construction provides excellent corrosion resistance, making it a reliable choice for long-term use in demanding environments. The multi-stage design specifically enables high head capabilities, ideal for deep well applications across irrigation, domestic, and industrial sectors.

## Performance Metrics

### Key Performance Metrics

**1 Type**

Multi-Stage Design

**1 Rating**

High Head Capability

## Construction & Design

### Protection Features

- Corrosion resistant housing
- Built-in check valve to prevent backflow
- Submersible motor protection

Primary Material

Stainless Steel

## Applications

### Recommended Applications

Irrigation • Domestic Water Supply • Industrial Use

## Installation

Discharge Connection

Standard discharge connection for straightforward installation

## Technical Attributes

Efficiency Focus

Energy Efficient, High Performance, Low Power Consumption
